MESSAGE FROM THE PRESIDENT

Dear Customer,

Welcome to **Penneyer-Dodge Company!** You are about to meet a family owned company that has been in the Precision Gage business since 1948. **Penneyer-Dodge Company** is a leader in the manufacturing of all types of precision thread and cylindrical gages, as well as the design and manufacturing of special fixture gaging.

The basic philosophy of **Penneyer-Dodge Company** has always been that our customers deserve our best effort. We know that quality and confidence is a prime concern in this competitive market.

The following pages will introduce you to consider the capabilities of our staff and our history of quality gaging as it relates to your individual problem areas.

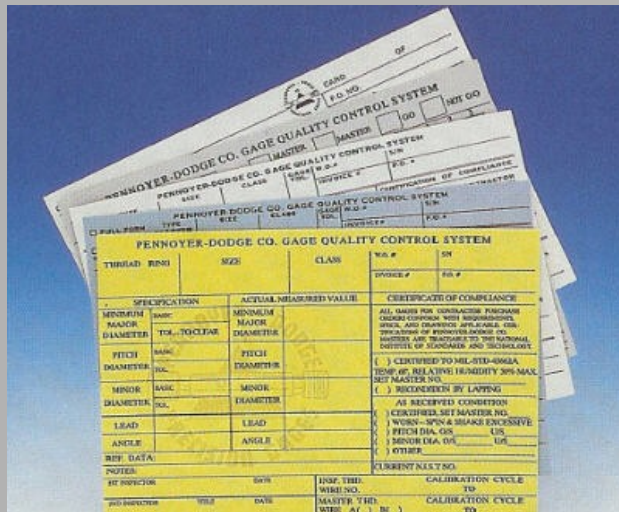

If you are already a customer, we would like to take this opportunity to thank you for your patronage. **Penneyer-Dodge Company** values the opportunity to continue serving you for all your gaging needs.

Hazel L. Dodge

Robert Dodge

SALES AND SERVICE

When you buy from **Penneyer-Dodge Company** you're buying proven quality and reliability. Our knowledgeable sales and engineering staff offer expert phone service in sales and technical information. We invite you to phone our Toll Free Number (**1-800-736-4243**) and let our staff assist you with your gaging requirements.

QUALITY CONTROL

Penneyer-Dodge Company maintains a strict quality control program to insure the accuracy of its measurements. There is an in-process surveillance throughout the manufacturing process that insures the quality of our product. Final inspection is performed on all gauges by trained technicians in our environmentally controlled labs.

All **Penneyer-Dodge Company** final inspection equipment is recalibrated on a designated recall schedule. The accuracy of all our final inspection equipment, measuring blocks and thread wires, are traceable to N.I.S.T. **Penneyer-Dodge Company** maintains a quality control manual which adheres to the most stringent government requirements.

CALIBRATION AND RECONDITIONING SERVICE

To aid customers in the calibration requirements of ISO 10012-1, ANSI/NC SL Z540-1, Mil-Std-45662A, **Penneyer-Dodge Company** supplies complete certificates of calibration for all gages traceable to N.I.S.T. These certificates contain basic as well as actual measured values. Used gage certifications show not only the as-found values, but if reconditioned, we also include the new in-tolerance values. Sizable cost and time saving can be achieved through this reconditioning process.

Pennoyer-Dodge Co.

Welcome to Pennoyer-Dodge Company!

* Progressive master setting plugs differ from conventional truncated setting plugs in that the plug member contains two distinct P.D. limit areas. The limits are based on the Min. and Max. P.D. limits for the ring gage it will be used to inspect. The front portion contains the minimum P.D. limit with a full form major diameter, while the back portion contains the maximum P.D. limit with a truncated major diameter.

* Progressive master setting plugs differ from conventional truncated setting plugs in that the plug member contains two distinct P.D. limit areas. The limits are based on the Min. and Max. P.D. limits for the ring gage it will be used to inspect. The front portion contains the minimum P.D. limit with a full form major diameter, while the back portion contains the maximum P.D. limit with a truncated major diameter.

6 - 8	1380.0	617.00	19.00	#7

NOTE:

Master gages for NPT working gages are L-1 design.

Master gages for NPTF working gages are special design to encompass the L-1 and L-3 length for the master ring and the L-2 and L-3 length on the master plug. A set consists of (1) master plug and (1) master ring.

MIL-P-7105B and SAE-AS-71051 does not specify design on ANPT master. Pennoyer-Dodge Co. designs these masters the same as the NPTF.

Pennoyer-Dodge Co. Cylindrical Taperlock Gages

American Gage Design / Short & Long Form Calibration Reports Available

How To Order

1. State Quantity desired.
2. Nominal decimal size and tolerance class.
Examples: .1500 class XX Go member, .1500 XX Go S.E.,
.1500 - .1509 XX D.E. Gage.
3. Go or Not Go or a complete double end.
4. Handles, either single end or double end. Handles ordered in colors other than Red or Green add \$16.00 per handle.

5. Special marking may be added for an additional charge. (\$12.00 min).
6. Short Form certifications N/C. Long Form Calibration Reports add \$18.00 per member.
7. Calibration stickers available @ \$3.50 per sticker (advise calibration cycle).
8. CHROME: Add 30% to each member.

Gage Re-Calibration Charges

The following "**Standard Published**" prices are for calibration of customer submitted thread plugs; thread rings; pipe plugs and rings; and cylindrical plug and rings **regardless of calibration results**. Expedited, safety related and Special Calibration charges are priced on application and will not be waived, regardless of the calibration results.

Pennoyer-Dodge Co. also manufacture's and/or calibrates many other types of gages. Please call/fax your inquiries.

Calibration of gages in accordance to ISO 10012-1, ANSI/NCSL Z540-1, Mil-Std-45662A. Minimum order is \$50.00

Lap I.D. and O.D. Parts to close
tolerances.
Lapping of Plugs and Rings -
Both Plain and Threads.

Pennoyer-Dodge Co.

Accurate Formula To Compute The Pitch And Major/Minor Diameters For Before Plate Thread Plugs And Thread Rings*

If no plating tolerance is given, then it is assumed that the maximum plating thickness will be nominal or minimum thickness given plus 50%. (see ASME B1.1-2003, pg. 64, 7.4.2; pg. 65, 7.5.2) The diameters of the gaging for external threads will be smaller while the diameters of the gaging for internal threads will be larger, than standard.

THREAD PLUGS

For the Go plug pitch diameter, **add** the **MAX.** amount of plate. For the Not Go pitch diameter, **add** the **MIN.** amount of plate. For the majors of work plugs, **increase** the major diameter on Go work plug by using half the **MAX.** amount of plate. On Not Go work plugs, **increase** the major diameter by using half the **MIN.** amount of plate.

Example

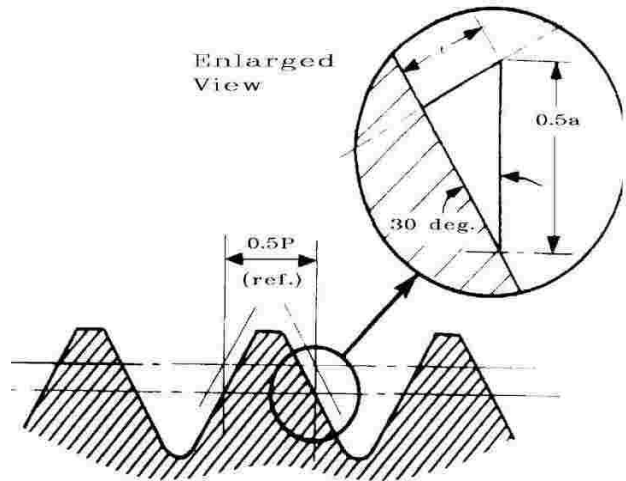

Based on .0002 to .0003 allowance per side (multiply by 4)
 .0002 X 4 = .0008 **MIN.**
 .0003 X 4 = .0012 **MAX.**
 1/4-28 UNF 2B B/P
Basic GO P.D. .2268 + .0012 **MAX.** = .2280 Go P.D.
Basic NOT GO P.D. .2311 + .0008 **MIN.** = .2319 Not Go P.D.
Basic GO major .2500 + (.0012 / 2) = .2506 B/P Go major.
Basic NOT GO major .2466 + (.0008 / 2) = .2470 B/P Not Go major.

THREAD RINGS

For the Go ring, **subtract** the **MAX.** amount of plate. For the Not Go ring, **subtract** the **MIN.** amount of plate. For the minors of thread rings, **decrease** the minor diameter on the Go thread ring by using half the **MAX.** amount of plate. On Not Go thread rings, **decrease** the minor diameter by using half the **MIN.** amount of plate.

Example

Based on .0002 to .0003 allowance per side (multiply by 4)
 .0002 X 4 = .0008 **MIN.** .0003 X 4 = .0012 **MAX.**
 1/4-28 UNF 2A B/P
Basic GO P.D. .2258 - .0012 **MAX.** = .2246 Go P.D.
Basic NOT GO P.D. .2225 - .0008 **MIN.** = .2217 Not Go P.D.
Basic GO minor .2103 - (.0012 / 2) = .2097 B/P Go minor.
Basic NOT GO minor .2148 - (.0008 / 2) = .2144 B/P Not Go minor.

RATIO OF PITCH DIAMETER CHANGE TO THICKNESS OF COATING (60° ONLY)

t = thickness of coating
 a = pitch diameter change due to coating

0.25a = t and a = 4t or the pitch diameter of a 60° thread changes by four times the thickness of the coating

BEFORE PLATING RATIOS FOR PITCH DIAMETER

60° thread = 4:1
 29° Acme = 8:1
 7°-45° Buttress = 4.3138:1
 14° 30°-5° Buttress = 11.9311:1
 10° Square thread = 23:1

Anodic Coatings—When calculating dimensions for pre-anodize gaging, a modification from the two above examples given, must be made.

For example, when calculating the increase in dimensions for the pre-anodize work plug gages, the value of thickness amount of the anodize applied, must be, for gage calculations purposes, reduced by one half, i.e., if the minimum and maximum applied anodize thickness dimensions were, .0004 to .0006 per surface, the values used in the calculations, would be only one half of the application, or .0002 to .0003 per surface. The results, in this example, would then be the same values, as the example shown above for the thread plugs. For thread rings, the same procedure would be utilized, in reverse. Reference Data: MIL-A-8625F, page 16.

* In accordance with ANSI/ASME B1.1-2003

Functional Location - P.D. Limit & Size

"When you want it Right...and Right away"

Pennoyer-Dodge Co.

“ TWISTER OUT ”

YOUR CHOICE FOR FUNCTIONAL THREADED AXIS LOCATION, REGARDLESS OF FEATURE SIZE

“TWISTER OUT” RING PRINCIPLE:

The “TWISTER OUT” ring with its P.D. related ground O.D. and faces, works by two independent thread gage sections that, when twisted, grips the flanks of the product thread. This locks and locates the functional thread axis of the product thread. At this point a variety of inspection techniques are possible, such as true position, runout, and concentricity to the part functional P.D. datum.

“TWISTER OUT” RING FEATURES:

- Reliable functional pitch diameter datum source for location of functional thread axis position.
- Accuracy to .0001
- No complicated moving parts.
- Easily adapted for SPC.
- Use of high quality tool steel (**Chrome also** available).
- Engineered and manufactured in the U.S.A.

“TWISTER OUT” RING ADVANTAGES:

- Allows part manufacturer to accurately determine runout, perpendicularity, true position, and concentricity of part parameters to the P.D. RFS EXAMPLE:

	Ø.005	P.D.
--	-------	------
- Inspects functional thread plug gages for special requirements, such as: “Pitch diameter of gages must run within .0002 to centers, or a face.”
- Assures assimilability
- Checks 360 degree part engagement.
- Major and minor diameters remain constant during inspection process as compared to alternate types of gaging.
- Portability and accuracy consistent with the needs of both the lab and manufacturing environment

Pennoyer-Dodge Co.

“ TWISTER IN ”

YOUR CHOICE FOR PRECISION THREAD LOCATION AND FUNCTIONAL SIZE

“TWISTER IN” PLUG PRINCIPLE:

The “TWISTER ” plug works by movable thread gage segments that engage one flank angle, while the thread body engages the opposite thread flank angle of the product thread. The resultant “flank grip” establishes the functional size and/or functional thread axis of the part, depending on how the twister plug is fabricated.

“TWISTER IN” PLUG FEATURES:

- Reliable functional pitch diameter datum source for functional size determination and/or functional thread axis location.
- Accuracy to .0001
- No complicated moving parts.
- Easily adapted for SPC.
- Consistent readings.
- Locks readings in place.
- Use of high quality tool steel (**Chrome also** available).
- Engineered and manufactured in the U.S.A.

“TWISTER IN” PLUG ADVANTAGES:

- Allows part manufacturer to take advantage of bonus true position part tolerancing

\oplus	$\varnothing.005$	\textcircled{M}	P.D.
----------	-------------------	-------------------	------
- **No need** for solid ring set master.
- Assures assimilability
- Can measure functional size of part, at 360 degree part engagement.
- Major diameter does not increase in size during the inspection process , as compared to alternate types of gages.
- Portability and accuracy consistent with the needs of both the lab and manufacturing environment
- Calibrate adjustable and solid thread rings.

STANDARD GAGING

Penroyer-Dodge Company has one of the largest selections of standard and **special** gages in stock. In many instances they are available for immediate delivery.

CERTIFICATION OPTIONS

1. Short Form Certificate of Conformance - No Charge
 2. Long Form Certifications with actual dimensions available at nominal charge.
- All gages are hand lapped for longer wear.

All gages are certified in accordance to MIL-STD-45662A and are traceable to the N.I.S.T.

CUSTOM ENGINEERING AND SPECIAL TOOLING

- **Fabrication** of custom gages to existing gage drawings.
- **Design and fab** capabilities from concept to completion per ANSI Y14.5.
- As a leader in the design and production of Functional Gages, we are familiar with the problems of the manufacturing industry. We invite you to request our services regardless of your R & D or engineering needs. We can design a new gage, or develop a less costly method to meet your present gaging needs.

OTHER SERVICES

- Parts analysis and "troubleshooting".
- Contract Jig Grinding with open machine time available.
- Custom Lapping.
- Special Thread Grinding.
